Talk to CrewAI

You: which environment is mostly impacted?

CrewAI:

The **dev** environment is most impacted, accounting for **3 out of 6** total errors. These include JSON parsing failures in `payment-service` (cust001), a missing configuration file (cust001), a `KeyError` in `reporting-service` (cust002), and another `KeyError` in `user-service` (cust004). The **stage** environment follows with 2 errors, while **test** has 1 error.

You: and what about application?

CrewAI:

The **payment-service** is the most impacted application, with **3 errors** reported across environments: JSON parsing failures in `dev` (cust001, Acme Corp), `stage` (cust002, Beta Industries), and a missing configuration file (`settings.prod.json`) in `test` (cust001).

Other applications affected include **inventory-service** (stage, cust005 Omega Retail), **reporting-service** (dev, cust002 Beta Industries), and **user-service** (dev, cust004 Delta Systems), each with **1 error**. All issues involved JSON parsing or missing keys (e.g., `user_email` in reporting-service and user-service logs).
